- Provide new revenues with minimal operational staff
- Leapfrog the competition with rich functionality
- Provide services on a truly global basis— domestic and international
- Benefit from multi-currency, multi-bank capabilities
- Benefit from denied party screening

# When the bank needs to offer new solutions to meet emerging seller needs ...

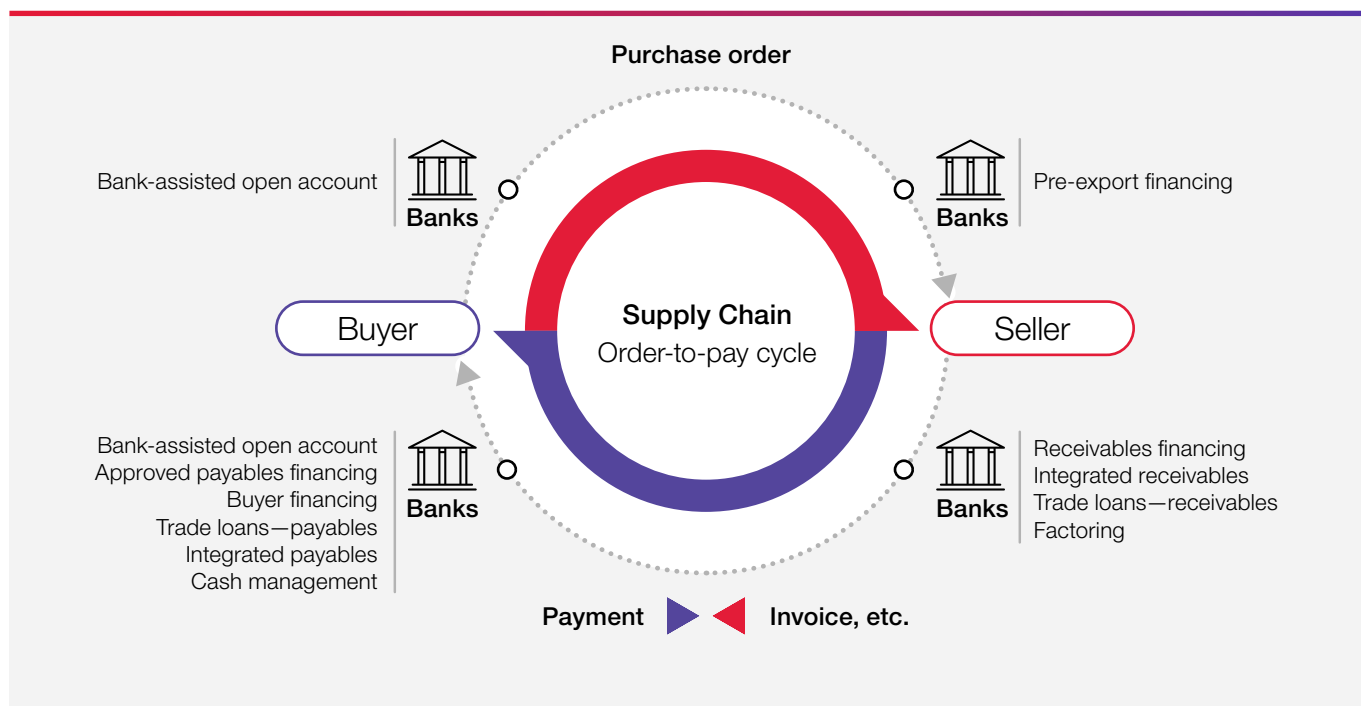

With CGI Trade360, the bank can move beyond traditional products to support a range of seller-centric solutions, including pre-export financing, receivables finance, and integrated receivables.

The financial supply chain continues to receive the close attention of corporate treasurers looking for ways to optimize working capital and free up cash in their supply chains. In particular, there is a growing demand for receivables financing as a means of helping treasurers improve days sales outstanding (DSO).

Additionally, many corporates are burdened by needing to devote significant resources to reconcile payments to invoices, with largely manual and inefficient methods that negatively impact DSO rates.

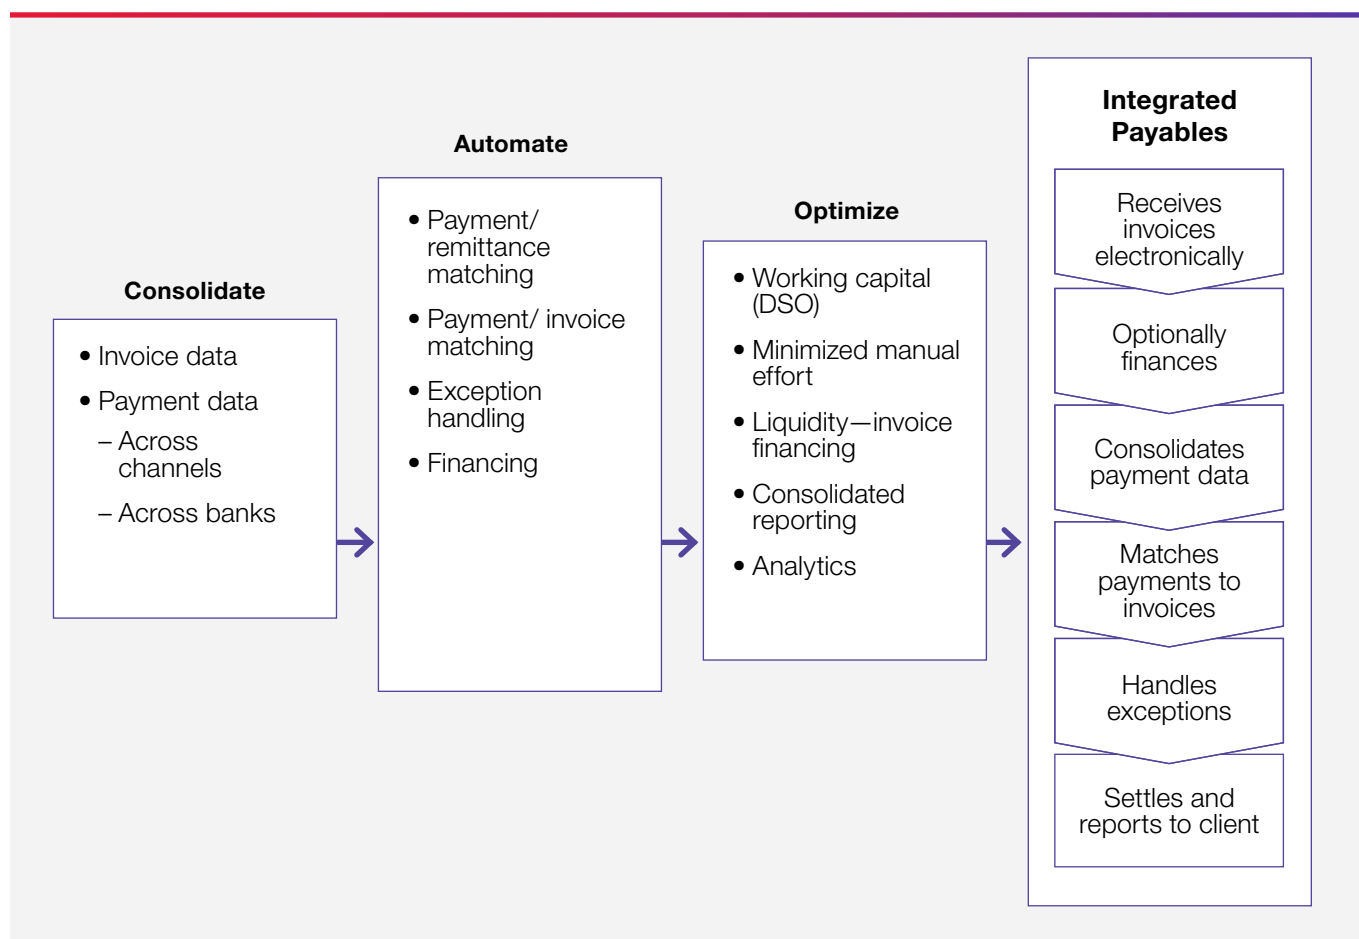

Banks already handle their clients' in-bound payment and remittance data, which places them in an ideal position to perform payment/invoice reconciliations. CGI Trade360 provides a higher degree of straightthrough reconciliation processing, enabling the bank to provide these services without significantly increasing bank staff.

Faster, more efficient application of received cash improves clients' DSO and optional invoice financing, while waiting for payment to arrive provides even more significant opportunities for DSO and working capital improvement.

# Integrated Receivables

Integrated receivables significantly reduces a seller's payment-to-invoice reconciliation effort and assists with working capital/liquidity optimization.

# Key functionality of integrated receivables

- Consolidation of transactions
  - Electronic receipt of invoices
  - Consolidation of payment data from all bank receivables channels and payments received through other banks
- Ability to finance invoices while waiting for payment
- Significant reduction in the seller's payment-to-invoice reconciliation effort and support for working capital/liquidity optimization
- Sophisticated and teachable matching engine that applies cash received against the seller's open invoices
- Handling of exceptions by the seller in the portal with automated assistance; for example, the matching engine will propose likely matches from which the seller can choose
- Automatic financing of invoices from the time they are received until payment is received, or financed on demand by the seller
- Online matching rules that enable the seller to teach the matching engine to achieve higher match rates
